Violence and sorrow continue in India; Gandhi's widow chosen to lead party

Associated Press

NEW DELHI, India — As her husband's body lay in state, the Italian-born widow of former Prime Minister Rajiv Gandhi was chosen Wednesday to lead his Congress Party through national elections.

In many parts of India, violence replaced sorrow over Gandhi's assassination. At least nine people were killed. The army was called out and curfews were imposed in several towns, after Gandhi supporters attacked police and members of rival political parties.

At Gandhi's childhood home in New Delhi, hundreds of mourners filed past his body, weeping and beating their chests.

The 46-year-old former prime min-

ister was killed in a bomb explosion Tuesday night in the southern Indian town of Sriperambudur, minutes before he was to address a crowded election rally. At least 15 other people also died.

Police said Gandhi appeared to have been the target of a suicide assassin who had strapped explosives to her body and detonated them as she approached him with a bouquet. The body of the woman was unrecognizable.

There were no immediate claims of responsibility that were taken seriously by police. "It's completely blind," said one officer involved in the investigations.

Congress Party leaders announced they had unanimously chosen Sonia Gandhi, 43, to lead the party through

the remaining voting for national elections.

Elections for a new Parliament started Monday. They were to have been completed Sunday, but have been postponed until mid-June.

The party's selection of Mrs. Gandhi was not immediately conveyed to the grieving widow, and it was not clear if she would accept. If she does, she would continue the Gandhi-Nehru political dynasty, which has ruled India for all but six of the country's 43 years since independence.

Mrs. Gandhi's entry into politics would echo the manner in which a politically naive Rajiv Gandhi accepted the prime ministership after his mother, Indira, was assassinated by Sikh bodyguards in 1984.

It would also be reminiscent of Indira Gandhi's own ascension to the prime minister's post. She was chosen in 1967, three years after the death of her father and India's first prime minister, Jawaharlal Nehru, by a syndicate of Congress Party leaders who hoped to retain power behind the scenes.

Sonia Gandhi is reserved and politically inexperienced. But she has campaigned alongside her husband in his dusty and impoverished northern Indian constituency of Amethi. She speaks fluent Hindi, the national language, and dropped her Italian citizenship in 1983.

The couple, who were married in 1968, have two children. Gandhi's assassination came a day after the country began its 10th general election.

chief of the Soviet general staff, said the issues in the conventional-forces treaty are very complex but he is optimistic they will be resolved and "what is left is not of great importance." Bush left open the possibility that Gorbachev might be invited to London in mid-July for the annual economic summit of the world's seven richest nations.

"No decisions have been taken on that," Bush said. "If his coming there could help with reform, and genuinely help with the reform, why that would be a very, very important matter." Previously, Bush had said merely he would talk with allied leaders about the subject. Secretary of State James A. Baker III said any economic aid to the Soviets must be tied to political reforms as well as the economic changes the Kremlin is struggling with.

"When you consider that the Soviet Union does retain the capability to inflict great damage upon the United States, it's important I think that we know that if we're going to get into that business in a big way, that we resolve some of these," Baker said in a subcommittee hearing.

Bush heatedly denied a story in the New York Times that said he had decided against inviting Gorbachev. "That story is totally erroneous, I regret to say. That means that it's wrong," Administration officials have been saying privately that there was little or no chance that Gorbachev would be invited to London, either as a participant or observer in the summit. "Somebody's peddling an erroneous line," Bush said. "We are dealing straight with Gorbachev. We are not playing games with him. I think he knows that. I think Mr. Moiseyev knows that."

Moiseyev said the Soviets would count their naval infantry under the limits for conventional forces in Europe, if the West agree to change the mix of armor and stored weaponry permitted under those ceilings. It was not immediately apparent whether the United States and other countries would accept such a amendment to the treaty. But Moiseyev's comments made it clear the Soviets had dropped their demand that their naval infantry, Marines, should be exempt from the treaty altogether. Moiseyev,

Torch runs on for Olympics

Members of the local police departments run with the Special Olympic torch Wednesday morning through Provo. See related story on page 3.

Emissions controls tightened

By MARK FREDRICKSON
Universe Staff Writer

The Utah County Health Department plans on July 1 to tighten its standards on emissions of hydrocarbons by cutting levels of acceptable emissions nearly in half for older car models, said a vehicle emissions director.

Terry Beebe, vehicle emissions program director for the Department of Health, said the changes will equalize standards for Utah County and other counties with emissions programs.

The department plans to publish the new standards in the next few days, which will give Utah County residents until June 17 to send written comment concerning the standards to the Health Department, he said.

The Environmental Protection Agency requires 1981 and newer car models to have a hydrocarbon level of less than 220 parts per million, said Dale Wells, technical supervisor for the Air and Toxics Division for the EPA Region VIII office in Denver, Colo.

Utah County emission standards are now at that level,

he said. The new standards will be stricter on older car models.

Lousie Jones, parking services supervisor at the BYU Traffic Office, said she is not sure what effect the new standards would have on BYU students.

However, to get parking permits, BYU students must show they comply with standards set by the Utah Bureau of Air Quality.

The Bureau sends the traffic office a list of county standards in the United States that are acceptable, she said.

If students are from counties not on the list, they must get a certificate of compliance from a local emissions station, Jones said.

The new standards will affect those students who must get an emissions test locally, Beebe said.

"Most vehicles should meet those cutpoints unless they are not running well."

Hydrocarbons are unburned gasses that combine with sunlight and oxygen to create ozone. Excessive ozone concentrations damage lung tissue.

New Utah County emission standards

Model year	Parts/million Hydrocarbons	
	current standard	new standard
1968-69	1500	800
1970-74	1300	700
1975-76	1000	600
1977-79	800	500
1980	600	300
1981 and newer	220	220

These are minimum allowable concentration figures for all passenger vehicles and trucks 6,000 pounds GVWR or less. The standards will go into effect July 1, 1991.

BRYANT BECK/Universe

Center fights myth society discourages women in science

BETHANY B. HADDOCK
Universe Staff Writer

Women are often discouraged from pursuing their interest and talent in math and science because of cultural factors, said Kay Franz, director of the Women in Science Center.

The Women in Science Center, located at 4030 HBL, was founded to support women in math and science education. "Women have a tendency to opt out of science and math classes because they lack role models in those fields," Franz said. "What we want to do is encourage women to have an interest in math and science to pursue it," she said.

The center sends out letters to incoming freshmen who have expressed an interest in science. They also have an annual conference to educate high school girls about opportunities available in math and science majors. They also have the beginnings of a scholarship fund that provides financial aid, Franz said.

"We want young women to be involved in breadth and depth of all career options," Franz said. "It is a cultural myth that women do not excel in math and science as men. 'What we are trying to do is, hey, women do do these things,'" Franz said.

One of the main purposes of the center is to help coordinate activities between the women interested in science. "We can meet one another and find out what type of jobs are available in the fields," Franz said. "You will never have the opportunity to focus on your studies

and prepare for the next 50 years of your life (like you do) during these four or five years at the university," she said. For that reason it is important the correct career decisions are made now, and that women do not cut themselves off from science because it seems to be culturally unrewarding.

One of the reasons for the decrease of women in math and science classes is they lack confidence in their abilities to perform well, Franz said. Women have the ability, but because of the way the classes are taught, something in their psyche causes them to choose other courses. "In science you cannot synthesize a response like in literature courses. You probably will not know enough to do that until you are a senior," Franz said.

Katy Jorgensen, 22, a senior from Houston, Texas, majoring in mechanical engineering said, "I have always been interested in science. My father is a mechanical engineer, and since I expressed an interest in science, he took more time explaining things to me."

"It is good to have a supportive parent who can advise me in my field of study. Not many women have that kind of support," Jorgensen said.

Jorgensen said the discouragement has been there but she has been so determined to go into science that it hasn't really affected her.

"The faculty at BYU has always been supportive of me. The Women in Science Center has informed me about other women that have gone into fields of math and science..." she said.

Utah cabin killer gets death penalty

Associated Press

COALVILLE, Utah — A jury gave admitted killer Von Lester Taylor the death penalty late Wednesday on each of two counts of first-degree murder in the December slayings of two women during a cabin burglary.

The 3rd District Court jury deliberated about 4 1/2 hours before delivering its verdict to Judge Frank Noel. Jurors had begun deliberations at 12:30 p.m., charged with deciding on either death or life in prison for Taylor.

"I'm very happy. I know now that Taylor won't be able to do this to any other family," said Linae Tiede, who witnessed the slayings of her mother and grandmother and was herself abducted by their assailants.

Taylor, a 26-year-old former Washington County resident, pleaded guilty May 1 to two counts of first-degree murder in the Dec. 22 killings of Kay Tiede, 49, of Humble, Texas, and her 76-year-old mother, Beth Potts, of Murray. In return for the plea, prosecutors dropped other felony charges.

His co-defendant, Edward Deli, was convicted of second-degree murder following a jury trial and awaits sentencing June 3.

Taylor put his hands to his head when the verdict was announced and asked, for "emotional reasons," that he not be required to decide immediately between death by lethal injection or a firing squad.

Noel set a sentencing hearing for Friday morning.

"He sincerely regrets what he did," said defense attorney Elliott Levine.

Taylor's relatives were quiet when the verdict was read. Tiede family members clasped each other's hands.

"Today we received some justice," said Mrs. Tiede's husband, Ralph Tiede.

Family members were upset that the jury in Deli's case was unable to return a capital homicide conviction because of one holdout juror who felt evidence did not support the charge.

"The thing that really upsets me is a system of justice that would allow one juror to allow 11 other jurors to change their minds," Tiede said.

In closing statements earlier in the hearing, prosecutor Terry Christiansen said it would be "hard to imagine a more horrible, brutal, ruthless or inhumane murder. This man has no human emotion or decency."

Taylor had said from the witness stand that "the death penalty for me would be the easiest way out, the quickest."

He said he and Deli never intended to kill anyone when they decided to burglarize the cabin eight days after their escape from a Salt Lake City halfway house.

Mrs. Tiede and her mother were shot as Linae Tiede looked on. Mr. Tiede, 51, and another daughter arrived at the cabin a short time later.

Mr. Tiede was shot twice in the head but survived.

He also had gasoline poured on him by the escapees, who then set fire to the cabin and abducted the daughters.

FDA to regulate human tissue banks

VIRGINIA BEACH, Va. — Down the hall from Bill Anderson's office at LifeNet Transplant Services lies an operating room complex that would make any hospital proud — four surgical chambers lined with glistening equipment. But no living patients undergo operations in them. And the U.S. Food and Drug Administration, which is taking preliminary steps toward regulating LifeNet and about 100 similar human tissue banks across the country, thinks of the company in non-medical terms.

"They define us as a manufacturer," said Anderson, who helped establish the company in 1982.

Virtually unknown until last week, LifeNet operates as one of the nation's larger organ and tissue procurement companies. The non-profit company lost its low profile because an AIDS-infected donor had been used for tissue and bone transplants that went to 52 people.

Three people — those who got the donor's heart and kidneys — died of AIDS. Three others who received tissue and bone transplants have tested positive for the virus that leads to the deadly acquired immune deficiency syndrome.

"We used every testing method that was available," said LifeNet spokesman Doug Wilson. "There was nothing in the medical history that would have prevented this donor from being a good donor."

The donor twice tested negative for AIDS.

Lawmakers rally to save military bases

WASHINGTON — Congressional hawks and doves sang with rare harmony Wednesday.

"Don't close my base," they implored a commission reviewing plans to slim down the military in the post-Cold War era.

"There is a need to reduce facilities," said conservative Rep. C.W. Bill Young, R-Fla.

But, he said, "it is hard for me to imagine a Tampa Bay area" without MacDill Air Force Base and its hospital serving 90,000 retired military.

More than 150 Senate and House members pleaded Tuesday and Wednesday before the Defense Base Closure and Realignment Commission, which held hearings that ran counter to the way things normally work on Capitol Hill.

The politicians showed up on time to fight for their bases, while commission Chairman Jim Courter, a former New Jersey congressman, limited them to five minutes each.

Kennedy staffer may have misled police

NEW YORK — When William Barry opened the door at the Kennedy estate Easter weekend and met Palm Beach police, it was not the first time the security expert and former FBI agent was plunged into a Kennedy family drama.

Almost 23 years ago, Barry was with Sen. Robert F. Kennedy when the candidate was shot in the Ambassador Hotel in Los Angeles. Barry was among those who helped tackle and disarm the assassin, Sirhan Sirhan.

Now, Barry, 64, is the subject of a possible obstruction of justice charge in the investigation of an alleged rape at the Kennedy estate March 30.

Palm Beach Police Chief Joseph Terlizze maintains that Barry misled detectives when they went to the estate Easter weekend to question Sen. Edward M. Kennedy and his nephew, William Kennedy Smith. A 29-year-old woman has accused Smith of raping her at the estate that weekend.

Barry this week again declined to give a sworn statement to Palm Beach County prosecutors and police who were in New York taking depositions. He appeared for a deposition April 30, but declined to give a statement after the prosecutor refused to grant him immunity.

Ethiopia's acting leader calls for peace

ADDIS ABABA, Ethiopia — With rebels advancing toward the capital, Ethiopia's acting president appealed Wednesday night for a cease-fire, pledging to form an interim government to halt what he describes as an "indiscreetly bitter" civil war.

But two main guerrilla armies, smelling victory the day after President Mengistu Haile Mariam fled into exile, rejected the cease-fire.

The Ethiopian People's Revolutionary Democratic Front said it would crush the remnants of Mengistu's brutal 17-year dictatorship. The truce was also rejected by the Eritrean People's Liberation Front. There was no immediate word from a third group, the Oromo Liberation Front.

Lt. Gen. Tesfaye Gebre-Kidan told a nationwide television and radio audience that his government was pressing for a favorable response from the rebels.

Boy, 11, dies from pipe-bomb injuries

SALT LAKE CITY — Eleven-year-old Adam Cook has died eight days after a pipe bomb was detonated as he sat in his father's truck.

The boy was declared dead at 12:12 a.m. today, said John Dwan, spokesman for the University of Utah Health Sciences Center.

Stephen Douglas Thurman, 32, West Valley City, has been held without bail on a charge of possession of an unregistered explosive device.

Murray Assistant Police Chief Paul Forbes said Monday that a capital homicide charge would be sought if the boy died.

The boy was sitting in the front seat of the vehicle when the pipe bomb exploded, sending a nine-volt battery into the boy's head, where it lodged in the brain behind his eye.

The blast occurred May 15 outside a Murray home following a Scout meeting. The boy had gone to the Toyota Landcruiser to wait for his father and honked the horn just before the explosion, witnesses said.

Authorities believe the blast was intended for the boy's father, Howard Cook. The complaint against Thurman said the elder Cook had been involved in a relationship with Thurman's ex-wife.

Gas company to install plastic fuel pipeline

By LORI SORENSEN
Universe Staff Writer

Mountain Fuel has been replacing all the low-pressure cast-iron portions in its system with plastic pipelines, and a complete changeover to plastic is aimed toward the end of this year, a company spokesperson said.

"We are one of the most progressive companies in the country," said Louise Jacobsen, spokesperson for the company.

She said plastic is easier to locate and it stays in the ground longer. "There is a significant decrease in maintenance costs because plastic does not corrode," Jacobsen said.

Jacobsen said repairs in the last four years have been decreased by 33 percent, despite the 11 percent increase in the system's mileage.

She said Mountain Fuel's pipe system extends for more than 9,000 miles, 5,680 miles of which are service lines. The new plastic pipeline is also

less vulnerable to earthquake damage because of its mobility, said Jacobsen.

Several other gas companies across the nation have switched to plastic pipelines. Southwest Gas Company, covering Arizona, Nevada and California, has been using plastic for more than 15 years.

Libby Howell, public relations director for the company, said plastic runs into problems when it is dinged (when someone digs into it), or when it is not properly laid. "The plastic pipes have to be laid in soft material like sand so they don't get punctured by rocks," said Howell.

Mountain Fuel is encouraging excavators to contact Blue Stakes, an underground utility line locating service, in order to avoid puncturing the pipes.

This service is free of charge and service employees will mark any underground natural gas, electric, telephone or cable television lines with stakes or paint.

Schools receive funds Special session bankrolls education

By STEVE MILLER
Universe Staff Writer

The 1991 Utah Legislature, in regular and special sessions, authorized appropriations of more than \$3.5 billion for the upcoming 1991-92 fiscal year, according to a report by the Utah Foundation.

The sum is approximately \$154 million, or 4.5 percent more than the authorization for the current fiscal year.

As in most years, education will receive the bulk of the increased funds. Total funding for education will increase by \$114 million in 1991-92. The report said education will receive nearly \$37 million in special supplements this year that was appropriated from surplus funds.

Allan Witt, information director of Utah Foundation, said the special supplements used for education are needed to help with the higher-than-

expected growth in public schools and colleges. Other special supplements will be used to pay for expanded case load growth in public and medical assistance as well

—Allan Witt
Information Director of
Utah Foundation

dustrial assistance to McDonnell Douglas, he said. The regular session of the legislature failed to approve a new bonding and capital projects bill before it adjourned in February. A special session was called in mid-April to deal with this and other issues.

The April session authorized the issuance of more than \$85 million in new bonds to finance various capital projects during the coming year.

Presbyteries argue sexuality

By WINNIE LEE
Universe Staff Writer

During its general assembly in June, the Presbyterian Church will debate adopting a controversial report concerning human sexuality.

"Keeping the Body and Soul Together," a report prepared by a committee of 17 ministers, academics and health professionals, states that sexual gratification is a human need and a right that should not be limited to heterosexual spouses or bound by conventional morality.

The committee said the Presbyterian Church needs to depart from the Biblical definition of sin to reflect the changing norms of today's society.

George Lower, pastor of the Springfield Community Presbyterian Church, said the general assembly is just a discussion on whether to further debate on the subject.

If the vote on the report is to further discuss the matter, then there will be a period of two years in which the congregations will discuss the possible adoption of the new standards. After the two-year discussion, the issue will once again be presented in the general assembly for a vote on

adopting the suggestions outlined in the report, Lower said.

The committee suggests sexual relations should be judged on a principle called "justice-love." This is defined as any relationship that has a basis of consent, fidelity, mutuality and honesty. As long as all these factors are present, the relationship is acceptable to the church.

"We're not trying to undermine marriage, we just feel that marriage is not what legitimates sexual gratification," said Rev. John Carey of Decatur, Ga., chairman of the committee.

Many members of the Presbyterian Church do not agree with the report's suggestions, however.

Eight former leaders of the denomination have launched a campaign against the committee's findings and 79 out of 174 presbyteries have petitioned to have the report rejected altogether.

"Keeping the Body and Soul Together" will be introduced in the assembly next month in Baltimore, Md.

Whatever is decided next month will bring about a lot of debate from within the church and among other denominations as well.

SCIENCE

Continued from page 1

said. "The files at the center keep me informed about internships, scholarships and any special information directed specifically to women," she said.

People come in occasionally to get information on various things, but the seminars are especially helpful, Jorgensen said.

"Attending the seminars has helped me realize all the different options I have for specializing within the field of mechanical engineering. It is always encouraging to see women who are successful in their field and have the opportunity to ask them questions about concerns and potential conflicts women face within the fields of math and science," she said.

Melanie Brown, 19, a senior from Sandy majoring in nursing, said, "I have been interested in science since I was little. I was accepted into an accelerated science program in the seventh grade," she said.

"It was a two-year intensive science program and there were only about seven or eight girls in the class and about 26 boys, so I felt like I had to prove myself," Brown said.

"My teacher would single me out a lot, but I am really stubborn, so that only made me want to work harder. I thought to myself, 'OK, I am going to show you,'" she said.

Brown said she was well informed about her options in science because she knew she either wanted to be a doctor or a nurse.

"I knew most of the fields in math and science were male dominated and I would have to be very determined to succeed."

"Cultural factors did play a role in my final career decision. If I was a guy, I would be a doctor," Brown said.

"I want to have a large family some day and nursing is a much more flex-

ible occupation than being a physician," Brown said.

"Now that I am into nursing, really glad I chose it," Brown said. "Being a nurse allows you to have of one-on-one time with the patient really like that aspect," she said.

Olympians and police in torch procession across town

By ROBIN CASH
Universe Staff Writer

Oakridge School and the University Police teamed up Wednesday to pass the Olympic torch.

A procession of Provo police cars, runners and torchbearers passed the Oakridge Stake Center on 900 East at 8:50 a.m. At that time, Jeff Strong of University Police received the Olympic torch.

At 9:15 a.m., Strong and other University Police officers passed the torch on to the next runner, Dan Bagley, a Special Olympian from the Oakridge school in Provo.

Bagley, along with seven fellow Special Olympians and nine University police officers, ran the Olympic torch south on 900 East.

The officers felt a strong closeness to the Olympians and felt the thrill of excitement the Olympians feel toward the summer games," Strong said.

Parents and children of the Oakridge School and Wasatch Elementary cheered the Olympic torch runners from the east sidewalk of 900 East.

Bagley and the other Olympians received certificates for running that were signed by Robert Kelshaw, University police chief, Strong said.

Strong said each law enforcement officer paid an entry fee of \$10.

The proceeds will go to the Special Olympics.

Earlier this month, the University of Utah and Provo Police sponsored a basketball game.

The basketball game raised \$400, which was donated to the Special Olympics, he said.

Command Sergeant Major Don R. Johnson, left, presents Col. O. Glade Hunsaker the Strength in Reserve Award at a command general's conference.

31 years of service recognized

Y professor honored by army

By JERRY B. COOKSEY
Universe Staff Writer

A BYU professor who served more than 31 years in the United States Army Reserve is the recipient of the Strength in Reserve Award.

Col. O. Glade Hunsaker, chief of staff for the 96th United States Army Reserve Command and a professor of British literature at BYU, received the award from two star Major Gen. Donald Bagley at an annual command general's conference.

The award is given once a year to military personnel or a civilian who displays outstanding service for or to the military reserve. The committee chooses the recipients from a seven-state area that includes more than 10,000 soldiers, Hunsaker said.

"It is rare a civilian receives the award, but this year

Sen. Orrin Hatch received the award for his support of the troops in the Persian Gulf," he said.

Hunsaker received a pewter statue of a Revolutionary War era minuteman that represents the long tradition of the citizen soldier whose historical role has touched every major military conflict involving the United States, according to a press release from the BYU communications office.

Hunsaker said he has served in many areas and has had leadership positions in both active and civilian military service. His military career came to an end this week as he retired from his position as chief of staff.

Hunsaker said he plans to continue teaching British literature at BYU and will continue doing research in the field of Shakespearean writings.

He has taught at BYU since 1970 in the English Department.

Books for Bucharest leave for Romania

By MELIA F. GREENAN
Universe Staff Writer

Books bound for Romania are leaving today from the old Albertson's building lot on the corner of 2230 South and North Canyon Road. This is the final phase in a BYUSA sponsored project to supply books written in English to the library at the Central University of Bucharest.

More than 900 boxes of books will be shipped by truck to Houston, then loaded overseas to Romania, said Jordan, assistant university li-

brarian of Technical Services at BYU. Humanitarian Services, a division of the Welfare Department of The Church of Jesus Christ of Latter-day Saints, is paying the shipping and packaging costs, said Jordan.

A total of 45,000 books were donated to the service project by students and faculty. After reviewing them, 20,000 books were selected for shipment to Romania, Jordan said.

Ion Stoica, library director for the Central University of Bucharest, specifically asked for books having to do with the sciences or classical En-

glish literature published in the last ten years, Jordan said.

There is a lack of books written in English in Romania because of the ban imposed by the former government on all outside materials. This ban was lifted in the winter of 1989. The result is a lack of books for students to study to familiarize themselves with the English language.

Knowledge of English is especially essential in the sciences, where English is the universal language, Jordan said.

Humanitarian Services is manag-

ing the dispersement of donated books not suitable for the library in Romania.

They are planning to give them to a number of Third World countries which are in need of books written in English, he said.

Jordan said although many book donation programs have been implemented at BYU, the Romanian book project is the largest one by far.

Genealogy library to be open Sunday

Universe Services

The Utah Valley Regional Family History Center, located on the fourth floor of the Harold B. Lee Library, will offer free classes in family history research on Sunday.

Computer courses offered will include the Personal Ancestry File workshop for beginning computer and PAF software, 9:30 a.m. to 1 p.m.; beginning Macintosh PAF, 11 a.m.; PAF enhanced features for IBM, 3 p.m.; notes and documentation on PAF, 4:30 p.m.; and PAF using genealogy exchange on IBM, 5 p.m.

Pre-registration is required for computer classes. Call 378-6200 for more information.

UNIVERSITY FORUM ASSEMBLY

Tuesday, May 28, 11 A.M., Wilkinson Center Ballroom

DR. B. DELWORTH GARDNER
BYU Professor of Economics

"Living in a Desert with Obsolete Water Institutions"

"Legal, social, and economic institutions that have governed development and allocation of water resources in the American West served society well during that region's settlement years. Now, however, these institutions are seriously obsolete and are causing severe economic and environmental harm. The political process has delivered massive income transfer from all American taxpayers to special interests within the region. Formation of water markets, which could permit compensated reallocations to higher-valued users, could support a higher standard of living and a quality environment in the American West."

B. Delworth Gardner holds B.S. and M.S. degrees in agricultural economics from the University of Wyoming and earned his Ph.D. in economics at the University of Chicago. He has taught at several universities, doing much consulting/advisory work both in the U.S. and abroad. Gardner has been a Ford Foundation Fellow here, is currently a fellow of BYU's David M. Kennedy Center for International Studies, has served as president of the Western Agricultural Economics Association, and is a fellow of the Utah Academy of Arts and Sciences. He has conducted numerous research projects related to his Forum topic and currently lists 163 published scientific papers. He is writing a book on the political economy of agricultural policy.

The Hunt is Over

Hunting for a diamond ring can be confusing. There are "friends" with "deals," "sale prices" and competing claims. Relax. At Wilson's we will teach you clearly and politely how to recognize diamond quality. Then shop around if you must. We believe our guaranteed quality, prices, selection, service and commitment to your complete satisfaction will overwhelm you.

Hunting around for the right person was hard enough! Finding the right store will be easy.

Nuts and 'bolts' of climbing examined

The controversial use of bolts used in rock climbing is the topic of a study sponsored by the Forest Service.

By SCOTT R. RACKHAM
Universe Staff Writer

To bolt, or not to bolt — that is the question facing the rock climbing world today.

A recent study examining the effects and use of expansion bolts on rock surfaces is being reviewed by National Forest Chief Bill Robertson, said Forest Service employee Jim Keller.

The survey, sponsored by the Forest Service, "looks at how we look at bolts," said Keller, Recreation Program Director for the Pleasant Grove Ranger District.

Keller said the task force examining the issue is composed of Forest Service staff, land management officials and members of a national climbing organization called ACCESS.

The study came in response to a clause in the Wilderness Act that states "no permanent improvements" are to be made on wilderness land. The Wilderness Act was passed by congress in 1964.

The ACCESS group proposed that bolts on climbing routes serve as vertical trail markers, much like signposts and metal plates do on hiking trails.

Although bolts do mark climbing routes, they also fulfill a much more vital function in climbing.

As the sport of rock climbing has matured and developed, much of the risk and danger of climbing has been eliminated through the use of more efficient safety devices which protect climbers from the inevitable falls that occur.

Perhaps the greatest and most controversial breakthrough is the expansion bolt.

Keith Payne, a 22-year-old busi-

ness major from San Diego, said, "Bolts are the greatest safety innovation that the climbing world has ever seen."

Payne, a member of BYU's Vertical Ascent Club, explained that fixed bolts allow climbers to safely scale rock surfaces that would otherwise be too smooth to place other forms of removable protection on.

The bolts used in climbing are 3/8th of an inch wide and about three inches long, he said. These bolts are placed in pre-drilled holes in the rock, and as they are rotated, they expand.

This creates enough friction between the bolt and the rock to keep artificial safety devices from pulling free from the rock, even under the tremendous pressure of long falls. It is these permanent bolts, and the holes they leave, that are at the root of the bolting debate.

Doug Hansen, of Hansen's Mountaineering in Orem, is opposed to the bolting of routes for sport climbing, although does condone their use in expedition climbing.

Hansen, like many climbers, feels the permanent scars left by old bolts are reason enough to look for other safety alternatives.

"I am hopeful that future technology will provide us with a better, non-damaging way to protect climbs," said Hansen.

Although the National Forest Service does not, as of yet, have any official policy regarding the use of bolts on Forest Service land, the new study could fill that void.

As climbers have ventured out on to more difficult routes, bolts have become a necessity for climbing safety.

"If you can protect any part of a climb with a device other than a bolt, you should," said Keller.

'Les Miserables' to be featured at mini-concert

By KATRINA M. JOHNSON
Universe Staff Writer

The BYU symphonic band is scheduled to "strut its stuff" in the ELWC

Memorial Lounge Tuesday at 3:30 p.m.

Bret Jackson, a part-time faculty member, will conduct the concert. He finished his masters program last

semester, and this is his first term of teaching. Jackson's "forte" is the trumpet, he said.

Some of the pieces to be played at the concert include "A Festival Pre-

lude" by Alfred Reed, "Sinfonians" by Clifton Williams, an arrangement of Bach's "Jesu, Joy of Man's Desiring" and a medley of songs from "Les Miserables."

Visions of Poland visit HFAC

By LISA M. CHRZANOWSKI
Universe Staff Writer

Two new exhibits will be featured in the Harris Fine Arts Center beginning Tuesday. Teresa Babinske, a Polish artist, will have prints on display in the B. F. Larsen Gallery, HFAC. This exhibit will give patrons the opportunity to view art produced in a distant culture with different perspectives on life and art, said Marcus A. Vincent, gallery coordinator.

"Teresa Babinske's work provides an interesting glimpse into the issues expressed in a formerly closed country. With a masterful sense of formal balance, Babinske weaves tales of whimsy, tragedy and parody into engaging compositions," he said.

Babinske was born Teresa Zieminska in 1955. She studied art at Pozan Fine Arts University where she met her husband, Piotr Babinske. She lives with her family in a small town in northern Poland.

Babinske's "Prints from Poland" were chosen for their quality but also to support artists in economically depressed regions. All the prints shown will be for sale, with proceeds being sent to the Babinske family.

Polish artist Teresa Babinske's prints offer a glimpse into scenes of Polish life.

BYU bagpipers to compete Saturday

By SCOTT R. RACKHAM
Universe Staff Writer

Hundreds of skirt-clad male musicians, including two BYU students, will descend upon Costa Mesa, Calif. this weekend, as the beach town hosts the Scottish Festival and Highland Games.

Two BYU student musicians will compete as part of the Utah bagpipe band, "The Salt Lake Scots." The Scots will compete against 17 pipe and drum bands from four western states in various march and medley competitions, said Don Cameron, chairman of the piping and drumming com-

petitions at the California event.

The two students, Colin Merry and Carl Wager, can often be heard weekdays practicing in a downtown park adjacent to the Provo Tabernacle.

Merry, a 22-year-old native of Scotland, is a computer science major who came to the United States two years ago to continue his studies at BYU. Merry learned to play the bagpipes in his hometown of Edinburgh, Scotland.

Wager, 24, from Moorpark, Calif., is a senior majoring in public policy. Wager, who began playing the bagpipes two years ago, also plays the piano and is learning to play the banjo.

Volunteers needed at Timpanogos Cave

By LISA M. CHRZANOWSKI
Universe Staff Writer

The Timpanogos Cave National Monument is looking for student volunteers to work this summer. In the past, several BYU students have volunteered their time, and the park hopes to work with more students this summer.

Volunteers will be asked to give tours of the cave, file and type documents, do maintenance work and hand out information to visitors. Although housing is not available for volunteers, in some cases reimbursements will be made for gas used to travel back and forth to Timpanogos.

The Volunteers in Parks, called VIPS, include students, teachers, tired couples, cub scouts and anyone else who donates time.

Patrick Smith, a park ranger, says he hopes to have many volunteers this summer.

"At the very least it will get people out of the house, working in mountains," he said.

Volunteers are trained and certified in CPR and first aid.

All volunteers receive training packets outlining procedures and planning the program in more depth.

More than 90,000 people visit Timpanogos last year, and this year an even greater number is expected.

SPORTS

Baseball players earn kudos

ALAN PETERSON
Universe Sports Writer

Five of BYU's baseball players are selected and honored to be on the 1991 All-Western Athletic Conference baseball team.

First baseman Chris Cooper, a sophomore from Orem, was named to the All-WAC first team.

"Chris is very deserving of this post-season honor," said BYU baseball coach Gary Pullins.

Pullins also said that Cooper has as good eye-hand coordination as anyone he has had.

"He has a good mind for the game and a good mental attitude," said Pullins.

Pitchers David Madsen, a freshman of Murray, Lance Clark, a senior Provo and freshman Ryan Hancock, from Cupertino, Calif. were named on the second team.

Ryan Hancock was also selected as Freshman of the Year. "Ryan has a great arm. It was great to see the only freshmen that made the All-WAC team came from BYU," said Pullins.

Hancock was drafted by the California Angels out of high school, but chose to come to BYU. He is also a quarterback for the BYU football team.

Brent Brown, senior of Sacramento, Calif., was chosen as the team's designated hitter and center fielder, John Wagner, junior of San Diego, Calif., receiving honorable mention.

Chris Cooper, first baseman for the BYU baseball team was named 1991 All-WAC 1st team this week. Cooper, a sophomore from Orem, has been a consistent hitter all year long.

SPORTS NOTES

•SALT LAKE CITY — The world's top women's volleyball players will be in Salt Lake City Sunday and Monday to compete in the first 1991 Diet Pepsi Utah Open Women's Volleyball Tournament at Liberty Park.

The two-day tournament features 32 teams in a double-elimination format. Competition is scheduled to begin at 9 a.m. each day and end at approximately 5 p.m. The finals will be held at about 2:30 Monday afternoon. Admission is free.

•NEW YORK — Former BYU baseball star Wally Joyner of the California Angels named the American League Player of the Week. Joyner led the American League in hitting, batting .519 with three homers and 13 RBIs during the week.

•ANAHEIM, Calif. — Fernando Valenzuela, who sparked "Fernandomania" in Southern California for more than a decade with the Los Angeles Dodgers is getting a second chance, this time with the California Angels.

His first start was with the Angel's Class A Palm Springs team Wednesday.

Valenzuela spent 11 seasons with the Dodgers, compiling a 141-116 record and 3.31 earned run average. He was cut by the Dodgers on March 28 after going 1-2 in spring training with a 7.87 ERA.

Tracksters hope to qualify for nationals

BLAKE STOWELL
Universe Staff Writer

Some members of the BYU men's track and field team are giving it one final effort Thursday to qualify for the 1991 NCAA championships at a meet at 2 p.m. at the BYU track and field.

The Cougars are competing against several Canadians attempting to qualify for their national team and Adam's Scott Meadows, a sprinter, who attends Southwest Missouri State.

Coach Hirschi said, "Most of our team will be involved as we try to improve some provisional marks into official qualifying marks." Hirschi said on Monday he will receive a phone call informing him which athletes with provisional marks can compete at the NCAAAs.

Qualifying marks have already been achieved by Frank Fredericks in the 100 and 200-meters, Brent Patena in the discus and Per Karlsson in the hammer.

During Tuesday's meet Karlsson, Jack Mohr and Leif Lundahl all achieved personal records in the hammer. "Per probably has the third-best record in the NCAAAs right now. He threw just over 220 (feet), and Jack and Leif were both only a foot shy of getting a qualifying mark," said Hirschi.

Distance runners David Spence and Jason Pyrah will compete in Long Beach, Calif., this weekend. According to Coach Hirschi, the distance races are held in Long Beach "because it is at sea-level. This makes it easier to get a qualifying time for the NCAAAs."

Spence will try to qualify in the 5,000-meter run, while Pyrah will compete in the 1500-meter and possibly the 800-meter.

Women compete in Last Chance meet

PATRICK MONNEY
Universe Sports Writer

Today closes BYU's Last Chance meet for the NCAA Championships.

BYU's Shu-Hwa Wang, is just inches away from qualifying for the championships. Wang, a freshman from Mioli, Taiwan, cleared passed the 21-2 feet qualifying mark twice on Tuesday, but fouled her right foot.

Laura Zaugg, winner of the West-Atlantic Athletic Conference heptathlon, is listed 17th on the list for the NCAA Championships.

They usually have 13 compete, but sometimes they have more, or others ahead of me on the list won't apply to compete, said Zaugg.

The NCAA will take 13 competitors for the event. Wednesday, Zaugg worked to improve her WAC score of 5341 but fell short.

Hui-Chen Lee qualified in the javelin throw, Anu Kaljurand qualified for long jump and 100-meter hurdles. Dorota Buczowska qualified for the 1500-meter run.

Golf team to compete in regionals

JENNIFER ROSSO
Universe Sports Writer

The BYU men's golf team has made it to the regional qualifying meet in Albuquerque, New Mexico and Coach Karl Tucker hopes they will win.

Qualifying for regionals has been an obstacle for BYU's team for the past two years, but Tucker is confident that they will succeed.

He said, "There are only three teams in the field which we haven't beaten, USC, Arizona and Arizona State."

"Our goal is to see if we can win this tournament. If we (only) plan to make one of the nine qualifying spots, then we won't make it." But he said "this team's good enough, we can advance into the finals."

If we have a weakness it is that we have backed off at times this year when we've gone against the bigger name schools," Tucker said.

BYU has beaten North Carolina and Arizona in the past few weeks.

"We have to take the momentum we gathered last week and carry it over to this week," Tucker said.

"We have no time to change our game plan or focus."

The same five juniors who won the Western Athletic Conference title will compete at the NCAA regionals, Ramon Brobio (74.1), Dean Wilson (73.5), Michael Weir (74.4), Ryan Rhees (74.4), and Jeff Kraemer (75.0).

If the Cougars qualify, they will go to the NCAA Championships on June 5-8 at Pebble Beach, Calif.

"It's good to have our team getting together. I finally feel like we belong. We're on our way back," said Tucker.

Eating disorders need treatment

By **TONYA CHRISTENSEN**
Universe Staff Writer

An increasing number of people are being treated for eating disorders in Utah, said the Clinical Coordinator of Adult Psychiatry and Eating Disorders at the Utah Valley Medical Center.

Eating disorders, which are more common in women, often develop in the teen-age years but can develop at any age, said Marian S. Bergin.

When 26-year-old Leslie Winter, an office manager from Heber, was 16, she thought she would be accepted better if she were thinner so she started the bulimic actions of bingeing and purging. She has had problems with bulimia since that time.

"Some people with eating disorders will not face the realities of what they are doing," Bergin said.

People have the misconception that they are in control when they have the disorder, but really they are not in control, Winter said.

Also, the people with the disorder may think others do not like them because they are fat, she said.

Bergin said an eating disorder is only part of the problem for those affected. "The eating disorder is often a way a person uses to avoid his/her emotional pain. There is often unresolved anger along with hopelessness and helplessness," she said.

Often there has been some sort of abuse, Winter said. The eating disorder is used to deal with the pain resulting from the abuse, she said.

Kayleen Mitchell, a psychologist at the Counseling and Development Center at BYU, said those with eating disorders often must overcome perfectionist thinking that involves thinking in all or nothing terms.

For instance, someone with an eating disorder may think they will not

be happy unless they achieve a certain ideal weight, she said.

Winter, who has had similar perfectionist views, said the reason for her views came partly because of the media.

"I think the media put a heavy stress on women to be thin. It's not idealistic," she said.

People with eating disorders may feel pressure from school and friends. Many of them feel great pressure to be accepted, Winter said.

Eating disorders can be very difficult to overcome, Bergin said. "An eating disorder is an addictive behavior."

While getting help in overcoming bulimia, Winter had to use healthy coping strategies.

In individual therapy, the first step would be to raise the individual's consciousness that what he or she is doing creates more pain, rather than less pain, in their life, Bergin said.

"The therapist tries to help them realize why they use food to soothe themselves," said Sally Barlow, assistant director of the clinical psychology graduate program that helps people with eating disorders.

The therapist also helps them regulate their eating, she said.

For some people, regulating their eating can be a lifelong struggle, Barlow said.

Bergin said patients are encouraged to get satisfaction in their lives by using other ways to express their feelings.

In group therapy at the Counseling and Development Center, group members give one another encouragement and suggestions in working on their individual goals, Mitchell said.

"The members appreciate being able to talk with other people who are experiencing similar difficulties," she

said. If those who are recovering from eating disorders do not learn healthy coping strategies, they are likely to revert back to the eating disorder, Bergin said.

Winter said rotting teeth may be one side effect for those who have bulimia. She said she has had to have a lot of dental work on her teeth because of her bulimia.

Heart trouble can be another result of an eating disorder, Barlow said.

Bergin said death may result in cases where the eating disorder is not overcome.

"The eating disorder destroys your body," Winter said. "There are some things I have done to my body that my body has not overcome," she said.

As advice to other people who may have an eating disorder, Winter said "Do not be afraid to admit if you have a problem and to get help. If you have a problem you need to take care of it. You're playing a game with death."

Winter said it takes courage to admit there is a problem. "Admitting you have an eating disorder does not mean you are weak."

"Then when you finally admit you have the problem, you need someone who will walk beside you as a friend,

not above you as a savior. You need someone who will be your friend and honestly care," she said.

Group therapy for those with anorexia and bulimia is offered on Wednesdays from 3-5 p.m. in 161 SWKT in the Counseling and Development Center.

Academy worthwhile restoration feasible, economical

By **DARRIN J. LYTHGOE**
Universe Staff Writer

Provo City Council concerns about the Brigham Young Academy restoration project are unfounded, project president said.

Pat D. Harrison, president of the Community Service Foundation of the Valley, said seismic and preservation feasibility studies in the county possession were outdated and no longer relevant. She said new data had been gathered and would be released after the foundation's new fundraiser could examine it.

Tuesday's Provo City Council meeting, Councilman Mark Hawaway cited program and seismic feasibility studies from January and February 1990 to point out flaws in project's management and potential for success. The program study of the project was poorly planned and underbudgeted, while the seismic study said the Academy buildings had definite structural deficiencies with respect to earthquake forces that would be remediated.

Despite the study's results, Har-

ison said all its recommendations have been met. These include obtaining realistic cost figures, developing short-term and long-term goals, identifying timelines and describing what programs will be moved into the finished facilities.

Philosophically, the study praised the project, calling it "an exciting concept, combining education, services, self-development, arts and recreations in a comprehensive program."

Harrison also said the results of the seismic study were no problem. "The buildings are structurally sound and have survived many small earthquakes," said Dan Losee, architect for the restoration project. "There is nothing that can't easily be taken care of." Both Losee and Harrison said the seismic study, done by a Salt Lake architect, had been inadequate. "The study consisted of one on-site visit," Harrison said. "Everything else he did in his office." "Fixing the buildings would be cheaper than tearing them down and building new ones," said Reese Goodwin, a BYU civil engineering professor who did the study's background work.

Settlement expansion hinders accord

Baker blasts Israel for delaying peace

Associated Press

WASHINGTON — Secretary of State James A. Baker III condemned the proliferation of Israeli settlements in occupied Arab lands Wednesday, saying their presence hinders the peace process.

"Nothing has made my job of trying to get Arab and Palestinian partners to agree more difficult than being confronted by a new settlement every time I arrive" in the Middle East, Baker told the foreign aid subcommittee of the House Appropriations Committee.

Baker also said that the United States and its allies in the Persian Gulf, in an apparent expansion of

their goals, now seek to force Iraqi President Saddam Hussein from power through the continuation of international economic sanctions.

Baker held out hope that the stalled peace process could be pushed forward.

The key, he said, is an agreement between Israel and Syria on the role of the United Nations in an international peace conference and whether the conference can be reconvened after its initial session.

"I think these two issues are the last pieces of this puzzle," he said.

Asked by the subcommittee chairman, Rep. David Obey, D-Wis., about the issue of Israeli settlements, Baker said, "I don't think there is any bigger obstacle to peace than the settlement activity, which continues not

Food class approved to fill G.E. elective

By **ALICIA E. BLATTER**
Universe Staff Writer

Beginning Fall Semester, a Food Science and Nutrition course will be counted as a natural science elective toward meeting the general education requirements.

Essentials of Human Nutrition 100 is a food-oriented study of nutrition facts and principles as a basis for dietary choices.

Lora Beth Brown, an assistant professor in the Department of Food Science and Nutrition said, "The class is not a chemical structure perspective, it is based on foods."

Coursework for the class involves reading, a number of small homework assignments, two brief papers, and tests. The class requires students to analyze their own diet through a number of methods.

Brown said about half of the students who enrolled in the course did so because they were interested in nutrition. Brown said that since this course will count as a G.E. requirement, more students will sign up for it.

"Now it will count in a category for them. We see it as a service to the students," Brown said.

Harold L. Miller, dean of general education, said each class must go through a three step process to become an elective acceptable to the Faculty General Education Council.

First, the proposal must originate within the department that is seeking the elective status, Miller said. The department must also agree to support and teach the course. Then a formal application is submitted to the Faculty General Education Council, he said. Finally, there must be a final administration approval of the proposal, he said.

only unabated but at an enhanced pace."

"I've about decided that we are not going to get any movement on settlement activity before we have an active peace process going" he said. But the lack of such movement makes it difficult to get that very process going, Baker added.

He said Israel has not only been creating new settlements or enlarging old ones each time he has gone to the Jewish state, but it also is seizing agricultural and other lands in areas occupied since the 1967 Arab-Israeli War.

"This does violate United States

policy," he added. "We have raised it with the government of Israel to no avail."

Baker said the U.S. drive for peace talks since the end of the Persian Gulf War has "defined a workable pathway to negotiations" that could seize a rare opportunity for peace.

"It is there for the taking, but it will not last forever," Baker said.

"What remains to be seen is whether the parties themselves are willing to seize this chance. The United States is there, ready and willing to help them try. But we cannot create the political will to act if that will does not exist in the region."

Utah leaders will talk, trade with East Europe

By LORI SORENSEN
Universe Staff Writer

Economic and political leaders will meet May 31 in Park City in an effort to promote trade between Utah businesses and the new democracies of Eastern Europe.

Rep. Bill Orton, chairman of the Trade Conference, said "It's a brand new market for American products because Eastern European economies are just now opening up to the capitalist world. I'm convinced Utah products can compete and flourish in that kind of environment. I think we have a rare opportunity to promote economic development here in Utah and strengthen free market economies of these emerging democracies at the same time."

— Rep. Bill Orton

clude Barbara Griffiths, deputy director for economics of the state department's Office of Soviet Affairs; Andrezej J. Klawe, economic counselor of the Polish Embassy; Dr. Tibor Nemes, commercial counselor of the Hungarian Embassy; Jaroslav Linhart, commercial attache of the Czechoslovakian Embassy; and William Delphos, president of Delphos International. Additional specialists from Utah's business community will also take part.

The conference is intended to educate Utah businessmen on the legal, marketing and financial challenges they must be aware of in doing business with the Eastern Europe, conference organizers said in their release.

The United States needs to export more goods, said one spokesperson on the planning committee. "The Eastern Block needs agricultural, high tech and medical goods to be imported into their countries. This will help us reduce the trade deficit a few years down the road," the spokesperson said.

Top economic officials from Poland, Hungary, Czechoslovakia and the United States will deal with trade analysis in economic overview sessions. Specific trade fields of law, finance and marketing will also be addressed, according to a press release.

Speakers for the conference will in-

Professors planning Missouri trip

By TIFFANY DAVIS
Universe Staff Writer

BYU's Church history department is compiling its sixth edition of "Regional Studies in Latter-day Saint Church History," and is preparing to visit historical sites in Missouri this summer.

"Visiting Missouri is part of the department's yearly tour of early historical Church sites.

"The Church history department sponsors a one-week visit to different areas of Church history," said Richard O. Cowan, professor of religion.

The tour and publication of books about Church history began in 1985 when the department visited historical sites in New England. The group has since toured Arizona, England, Scotland, Wales, New York and Ohio.

"Prior to visiting the site, each faculty member

prepares specialized papers and documents about the location.

The papers are then presented to faculty members at meetings and firesides before or during the tour of the historical site.

After each paper has been presented, a committee reviews the papers and decides which will be included in a one-volume publication," said Milton V. Backman, professor of Church history.

The regional studies are published mainly for the scholarly community and for students who want a supplement to their textbooks.

"We hope to publish information in the regional studies that is not generally known... The material is something you cannot find in a textbook," Backman said.

This year a two-day symposium was held on March 29-30.

Authorities on church history were invited

from outside the community to participate.

"Members from the archives of the Reorganized Church of Jesus Christ of Latter Day Saints and mission presidents were invited to join in panel discussions and formal presentations," Backman said.

Backman said he believes Missouri is a neglected area in church history.

"There is no one major book dealing with the phases of Missouri history.

"Missouri is important because of the happenings from the time of Adam to the time of the Millennium," he said.

One of the advantages to the trip is being able to travel with colleagues in the department.

It is an opportunity to get to know one another better, Cowan said.

Next year's trip is tentatively set for Nauvoo, but no definite plans have been made.

Israelis battle over Jordan

Protesters say powerstation could slow flow of biblical river

Associated Press

DAUGHTERS OF JACOB BRIDGE, Israel — Polluted, rerouted, depleted — the Jordan is still a river, but only just.

Now comes more news to chill the soul: a power station is being built on the only stretch of the biblical river that can still be called unspoiled.

"This is a gathering to say farewell to the Jordan River," said Doron

Harry, of the Society for the Protection of Nature in Israel, as he ushered protesters onto a bus that would take them to a rally in defense of the Jordan.

"Old wives' tales," snorted Colin Primost, farm manager of Kfar Hanassi, the kibbutz that is building the power station. "We're changing nature, but we're not harming it. A year from now nobody will even notice it."

Nature's defenders say the plant will slow the Jordan's flow by siphoning off up to one-third of its waters to power the turbines. They fear it will damage the river's ecology and scar the landscape to produce a mere 0.5 percent of Israel's electricity supply.

The Environment Ministry says the kibbutz has made strenuous efforts to avoid damaging the environment. Nonetheless, it says the risk is too great for so little electricity.

Mariah Proctor surrenders to the sun's rays in a futile attempt to study, as the weather looks a little more like May is supposed to look. Forecasters are expecting partly cloudy skies today and mostly cloudy skies for much of Memorial Day weekend. See Weather, page 2.

Job hunters get early start

Placement Center helps find jobs

By WINNIE LEE
Universe Staff Writer

Life is more stressful today than it has ever been. Driven by the need to succeed, the average college student will begin looking for employment long before he or she walks across the

auditorium to receive a diploma.

The search for a job can be made a little easier with the help of the BYU Placement Center, D-240 ASB.

"We help students of all levels, from bachelors, to masters, to people who have received their doctorates," said R. Wayne Hansen, managing di-

rector of Placement and Employment Services.

Hansen says about 3,500 students come in each year looking for assistance in job placement. In addition to registering on the Placement Center computer, there are many other tools available to students in the Placement Center. Workshops are offered periodically on subjects such as writing resumes, interviewing techniques and anything else that might be useful in searching for a job, Hansen said.

Students can also use the literature available at the Placement Center library to look for jobs on their own. Publications from companies, trade magazines and other texts are accessible for the job hunter to browse through.

"We feel graduates from BYU are highly regarded in the job market," said Hansen. He said about 500 to 600 employers who are interested

in filling positions contact BYU each academic year. Hansen said every fall and winter, employers come to campus to recruit and interview students. Those employers who cannot make it to campus, write or send letters about job openings that are available within their companies, he said.

The employers who come to BYU receive a computer copy of a student's qualifications, Hansen said. Although it is not a full resume, it contains some of the student's qualifications in an abbreviated form, he said.

To register on the computer, a person needs to fill out the available form and then set an appointment to enter the data on a computer. The whole process takes about one half hour.

"We wipe the slate clean at the beginning of each academic year," said Hansen. "So it is best to enter your name on the computer one or two semesters before graduation."
